

### Contribution Diary : Yohan Pellerin

During the PRO2 group project, I actively engaged in various meetings, both within our team and with the client company. Within these meetings, I played a crucial role in shaping the overall project plan by providing valuable insights and participating in the design process. Once the project's framework was established, we divided our tasks among team members, and I focused on the critical task of analyzing the expansion potential in Yemen.

To conduct this analysis effectively, I delved into comprehensive research on the state of healthcare infrastructure in Yemen, gathering data on hospitals, medical facilities, and healthcare services. Recognizing the need for a basis of comparison, I selected Libya as a reference point because Speetar already had a successful presence there. Consequently, I conducted an in-depth analysis of healthcare infrastructure in Libya, studying factors such as hospital facilities, medical resources, and internet connectivity, which is pivotal for telemedicine operations.

Upon completing these analyses, I assumed the responsibility of formulating recommendations for the company based on the insights derived from the research. I thoroughly assessed the data and crafted a detailed report to present our findings clearly and coherently.

In addition to these primary tasks, I also provided feedback to three other groups. Moreover, I consistently reviewed our own team's progress and the project report to ensure that it maintained a logical structure and addressed the project's objectives effectively. Whenever I identified any areas where improvement was needed, I communicated these issues to the team, fostering a culture of collaboration and continuous improvement within our group.
